## All Phase Communications Educates Customers on Password Protection Policies to Keep Their Businesses Safe

### *Leading Unified Communications Helps SMBs Protect Their Enterprise Assets*

Seattle, WA – August 30, 2016 –All Phase Communications, an industry leader in unified communications, announced today that the company is educating small to mid-sized businesses (SMBs) on password protection policies to help safeguard their businesses from a variety of threats.

Password management has become increasingly important with daily attacks from hackers specifically targeting SMBs. For example, 6 million LinkedIn account passwords were compromised just a couple of years ago and the list of breach has grown dramatically since. Anyone who has been using major social media sites, like LinkedIn, may have received a notification in the past couple months forcing them to reset their passwords. This is the result of the colossal breach in Internet security and All Phase Communications has taken the initiative to advise businesses on how to protect themselves.

As the Internet continues to expand in complexity, so do its vulnerabilities. In order for business owners to protect their organizations, they need to utilize best practices in password security. Here are some steps that business owners can take immediately.

#### **Never Use the Same Password**

**Twice:** One of the most effective ways to prevent breaches is also the simplest; never use the same password for multiple accounts. Strong, unique passwords, with symbols, numbers and capital letters are

usually far more effective than anything else.

#### **Enable Two-Step**

**Authentication/Verification:** This is one of the other simple ways that a business can instantly upgrade the security of their entire network, by simply passing a company policy. Two-step password authentication essentially means that when a user logs into their account, they'll be required to confirm that log-in attempt by replying to a text message or phone call. This best practice makes it much harder for hackers to impersonate the true account owner because it requires them to have access to multiple accounts before their hacking attempts can be effective.

#### **Stay Vigilant Against Phishing:**

Hackers have long relied on phishing, a common strategy in which a hacker attempts to defraud an online account holder of financial information by posing as a legitimate company. For example, a hacker will gain access to your account information by purchasing your email and password on the black market and then they will log into your email and send a desperate email to one of your contacts, posing as you. "John! My transmission just blew and I'm stranded out here. My phone is about to die. Can you send me \$2,000 to this account? I'll pay you back as soon as I get into town." Users need to constantly remain vigilant against attacks like this because they are prevalent and have proven effective over the years.

"While these are a few proactive steps a company can take in the right direction, they are only a mere shadow of what is possible if they work with a true

managed IT services provider, like All Phase Communications, who is regularly monitoring, maintaining and optimizing the security of every device on a business's network," stated Iain Beveridge, President of All Phase Communications. All Phase Communications partners with SMBs that need to secure a competitive advantage with advanced technology and want to remain focused on growing their business, instead of keeping up on the latest in online security. "That's our job," said Mr. Beveridge.

#### **About All Phase Communications**

Founded in 1986, All Phase Communications is a customer-service oriented telecommunications company with more than 25 years experience in the industry. All Phase is a preferred installation provider with leading VoIP (Voice over Internet Protocol) technology partners including ShoreTel and Toshiba. As the name suggests, All Phase handles all phases of VoIP installation including network assessment, system design, project management, system implementation, system deployment and training, and system maintenance. Based in Shoreline, Washington, small, medium and large companies including City of Bellingham, Glacier Fish, Cutter & Buck, Cascade Valley Hospital and Clinics, Ben Bridge Jewelers have relied on All Phase for their VoIP expertise to gain a competitive advantage in the marketplace by reducing operating costs, streamlining customer service, and improving productivity.
