All Phase Communications Educates SMBs on the Importance of 4G Backup

*Leading Unified Communications
Provider Finds New Way to
Strengthen Internet Performance for
Businesses*

Seattle, WA – August 28, 2017 - All Phase Communications, a leader in unified communications, announced today that the company will be launching an awareness campaign to educate small to mid-sized business (SMB) owners about the importance of having a 4G backup plan in their organizations. With the vast majority of business owners virtualizing their infrastructure and investing heavily in cloud-based technologies to support an increasingly mobile workforce, businesses need more reliable connection to the internet than ever before. While many SMBs are routinely frustrated by incessant internet outages, especially in a wireless network environment, companies must understand the power of 4G Internet. As a trusted technology advisor, All Phase Communications is launching a campaign to teach business owners the power of 4G backup and how organizations can utilize this advancement in order to bolster productivity and ensure smooth operations, at all times.

For many businesses, a WAN (Wide Area Network) outage is largely inevitable. Many businesses simply accept these outages as an unavoidable fact of life while they simultaneously cause damaging losses, in terms of tens of thousands of dollars in lost productivity, and missed opportunities, each instance that these outages occur. In the past, business owners purchased additional analog lines to circumvent the problem and to ensure that their staff wouldn't be prevented from doing their work, however, today those extra analog lines are no longer necessary. All Phase Communications has found that using a 4G cellular network, as a backup to a traditional wireless network, can serve the bottom-line goal of keeping their employees going, no matter what hiccups arise in internet connectivity. The goal of 4G backup is simple, it's to provide a secondary network interface for remote routers to access when the primary link is unavailable. With inevitable internet outages facing almost every organization, and the staggering costs associated, it simply makes no sense for a business to risk its entire well-being on a single point of failure.

While it is still advisable for an SMB to utilize their existing networks as a primary resource, it's also prudent for organizations to have a 4G failover in place, in the event of an internet outage, so that employees can keep going no matter what happens.

As SMB infrastructure continues to migrate more and more to a cloud-based environment, nearly all SMBs have an even heavier demand on internet connectivity than they did, even only a few years ago. Employees have grown to simply expect the internet to "always remain on" and without this in place many employees simply cannot perform their jobs. The ubiquity of 4G cellular networks has helped to strengthen cellular networks across the nation as a whole and at this point in time, this has now become a very cost-effective, minimally intrusive, means to create redundancy in a SMB in virtually no time. Paired with a high-performing wireless network, 4G backup simply makes sense for SMBs who take their productivity seriously.

"We advise our customers on how to create redundancy, in the most cost-effective means

possible,” stated Iain Beveridge, President of All Phase Communications. “Our goal as a technology advisor is always to innovate and find ways to leverage futuristic technology to increase our customers’ profitability, today. We believe that our customers should incorporate this solution into their networks to ensure that their businesses remain in operation regardless of what’s going on in the WAN environment.”

About All Phase Communications

Founded in 1986, All Phase Communications is a customer-service oriented telecommunications company with more than 25 years experience in the industry. All Phase is a preferred installation provider with leading VoIP (Voice over Internet Protocol) technology partners including ShoreTel and Toshiba. As the name suggests, All Phase handles all phases of VoIP installation including network assessment, system design, project management, system implementation, system

deployment and training, and system maintenance. Based in Shoreline, Washington, small, medium and large companies including City of Bellingham, Glacier Fish, Cutter & Buck, Cascade Valley Hospital and Clinics, Ben Bridge Jewelers have relied on All Phase for their VoIP expertise to gain a competitive advantage in the marketplace by reducing operating costs, streamlining customer service, and improving productivity.
