All Phase Communications Offers Next Generation Cybersecurity Solutions

SMBs Now Experiencing Cyberattacks That Have Taken Down Large Enterprises

SEATTLE, WA – January 2019 - All Phase Communications a leading managed technology services provider (MTSP), is helping small to mid-sized businesses (SMBs) equip themselves with the necessary cybersecurity protections that every modern company needs to survive. Over the past, large organizations including Target, Equifax, Yahoo and now, Marriott, are being breached by cyberattacks. While these companies have huge IT budgets and dozens of IT staff to ward off attacks like these, they still have proven vulnerable. SMBs face the same level of cyberattacks and must take the proper precautions to protect their customers' data as well as their own information from being compromised.

Cybercrime now outstrips all other organized crime combined. As larger enterprises are forced to invest in the strength of their IT infrastructure, via policies and penalties, cybercriminals will only have one place to go, small businesses. The most recent company to be in the news as the result of an attack is Marriott International. According to Time Magazine, "The hack affects some 500 million guests, and for about 327 million of them, the data included passport numbers, emails and mailing addresses," Marriott said. Some credit card details may also have been taken."

Iain Beveridge, President of All Phase Communications added, "The bottom line is that if an SMB is hit with an attack like this, through penalties and damage to company reputation, it would very likely put them out of business. Coincidentally, this serious problem is actually relatively simple to remedy."

Most companies have already taken a few precautionary measures, they have a backup and disaster recovery solution, firewalls, AV malware solutions and perhaps another component here or there. Yet, hackers thrive on businesses that are utilizing obsolete technology to run their business. If businesses want to ensure their compliance with new regulations as well as to ensure that they don't get hit with massive, unexpected fines, they need remain current with cybersecurity. In other words, they need to be utilizing next generation cybersecurity solutions to remain one step ahead of hackers.

All Phase Communications leverages sophisticated next generation cybersecurity solutions that includes darkweb monitoring, email filters with malware protection, staffed 24x7 security operations centers (SOC), password vaults, quarterly network vulnerability scans, DNS "dangerous website" blockers, phishing simulators, security awareness training to educate companies on what emails and web sites not to click on, and expanded AV malware protection.

"Minimal protection simply doesn't cut it, anymore," commented Beveridge. "We have made a

significant investment in cybersecurity technology, educating our team of professionals, and achieving a variety of cybersecurity certifications. This has given us a unique competitive advantage in the marketplace, but more importantly we have the tools and knowledge to provide an unparalleled cybersecurity offering to our customers."

ABOUT ALL PHASE COMMUNICATIONS

Founded in 1986, All Phase Communications is a customer-service oriented telecommunications company with more than 25 years experience in the industry. All Phase is a preferred installation provider with leading VoIP (Voice over Internet Protocol) technology partners including ShoreTel and Toshiba. As the name suggests, All Phase handles all phases of VoIP installation including network assessment, system design, project management, system implementation, system deployment and training, and system maintenance. Based in Shoreline, Washington, small, medium and large companies including City of Bellingham, Glacier Fish, Cutter & Buck, Cascade Valley Hospital and Clinics, Ben Bridge Jewelers have relied on All Phase for their VoIP expertise to gain a competitive advantage in the marketplace by reducing operating costs, streamlining customer service, and improving productivity.
